

# Care for the elderly

## Mr. G's Journey – Pre Consolidation

Mr. G is an 85 year-old living in the community with symptoms of delirium and mobility issues.

Mr. G. presents to St. Boniface Hospital ED with symptoms of delirium

Mr. G transferred to CAU for further assessment. Specialty services not required and no additional acute care needs

Mr. G waits another 30 days for placement into an available PCH bed

**Patient placed into PCH 34 days following presentation to ED**

Urgent concerns managed in ED but further symptom management is required for full recovery

Remains in CAU for 3 days before being admitted to an inpatient bed with a potentially treatable delirium. Discussion with care team and family in ED notes Mr. G will be headed to PCH after acute care stay

# Priority Home Philosophy

## Mr. G's Journey – Post Consolidation

Mr. G is an 85 year-old living in the community with sudden confusion and mobility issues.
